UNIVERSITY  
SINGAPORE

# Literature Search Techniques & Library Resources

EEE FYP 2021

# Outline

Literature Review

Search Techniques

Library Resources and Tools

Citing References

# Learning Outcomes

By the end of this workshop, you will be able to:

- Explain the research cycle and the importance of doing a literature review
- Identify appropriate search strategies and search tools to find information
- Use library databases to obtain scholarly resources

# Library home page

<https://www.ntu.edu.sg/education/library>

The screenshot shows the NTU Library home page. At the top left is the NTU logo and name. Below it is a breadcrumb trail: Home > Education > NTU Library. The main section is titled 'OneSearch' and features a search bar with the placeholder text 'Search for books, articles, media, and more' and a red 'Go' button. Below the search bar is an 'Advanced Search' section with an 'Explore:' label. Under 'Explore:', there are four buttons: 'Databases', 'Journals', 'DR-NTU', and 'DR-NTU (Data)'. The 'Databases' and 'Journals' buttons are highlighted with a red rectangle. To the right of the search bar is a light blue box containing two bullet points: 'E-resource access' and 'Ask a Librarian'. Further right is a grid of six blue buttons: 'My Account', 'Workshops', 'Book Facilities', 'Ask A Librarian', 'Library Locations', and 'Opening Hours'. The 'Ask A Librarian' button is highlighted with a red rectangle. At the bottom left is an 'Announcements' section with the title 'Enhanced safety measures at NTU Library from 22 July 2021 until further notice' and a list of three bullet points. At the bottom right is a 'Library Essentials' section with a list of five bullet points. The top right corner contains a notification bell icon, a search icon, and a menu icon.

# Literature Review

# Research as Inquiry

Approach research as open-ended exploration and engagement with information. Tap into your intellectual curiosity, ask questions, and be flexible – ambiguity can help the research process!

Research is iterative and depends upon asking increasingly complex or new questions whose answers in turn develop additional questions or lines of inquiry in any field.

(ACRL Framework for Information Literacy for Higher Education, 2015)

# Doing research

## Problem Discovery & Definition

- Task Encounter
- Identify & define problem
- Define problem
- Identify question/focus
- Conduct a Literature Review

## Research Design

- Develop research model/ theoretical framework
- Identify research instrument
- Identify collection techniques

# Research Cycle

## Communicate & Present

- Research paper, Dissertation, Thesis, etc. along with a complete bibliography

## Data Analysis

- Understand, Critically evaluate, Interpret data that has been gathered

## Data Collection

- Survey
- Experiment
- Observation

# Literature Review

- Research is not done in a vacuum or in isolation.
- It has to be positioned into the existing scholarly work.
- The researcher needs to know what has already been covered in his/her field of research, like:
  - what variables were analysed?
  - what were the relationships amongst the variables?
  - what are the existing definitions, theories and findings?

# Purpose

- Purpose of literature review
  - to explore the works of others
  - to look at existing relevant works in your research area
  - to identify important variables from other studies pertinent to your research
  - to identify gaps, misconceptions, contradictions in the issues relevant to your research
  - to assist in developing your research design
- Literature review is an essential entity in research and is a part of:
  - dissertations
  - reports
  - proposals
  - papers

# Literature Review Process

## Four major steps:

### 1. Problem definition

- identify a research problem or idea
- formulate research questions
- identify relevant **KEYWORDS**

### 2. Search strategies

- identify your information needs
- develop information seeking strategies
- identify relevant information sources
- use **KEYWORDS** to conduct searches
- retrieve relevant articles, books, etc.

Access [SAGE Research Methods](#) database to read more about Reviewing the Literature

### 3. Analysis

- review and summarise articles
- take detailed notes
- focus on identifying and comparing issues, variables, theories, methods and gaps
- extract key information and tabulate key items in a matrix or summarised fashion

### 4. Writing

- include pertinent variables, main issues and theories
- analyse how your study relates to the available literature
- highlight gaps in research works
- compare and contrast studies and findings
- create a list of references - a **BIBLIOGRAPHY**

# Organising content

Use a graphic organiser - Matrix (areas of studies vs variables – compare issues covered in different articles)

Literature Review Matrix Template

| Title<br>Author/<br>Date | Research<br>Question(s)/<br>Hypotheses | Methodology | Analysis &<br>Results | Conclusions | Implications<br>for<br>Future research | Implications<br>For practice |
|--------------------------|----------------------------------------|-------------|-----------------------|-------------|----------------------------------------|------------------------------|
|                          |                                        |             |                       |             |                                        |                              |
|                          |                                        |             |                       |             |                                        |                              |
|                          |                                        |             |                       |             |                                        |                              |
|                          |                                        |             |                       |             |                                        |                              |

# Quiz - Connect to [www.wooclap.com/EEEFYP](http://www.wooclap.com/EEEFYP)

Why is it important to do a literature review for your research topic?

1. To document your research
2. To determine the impact of a work on its field by measuring how often it has been cited by other researchers
3. To identify gaps, contradictions, points of disagreement between scholars in issues relevant to your research
4. None of the above

**How will you go about searching for information on the research topic**

# Information Sources

- Books (including book chapters)
- Journal articles ([peer reviewed](#) typically)
- Conference proceedings
- Dissertations & theses
- Reports – technical, market, etc
- Papers – discussion, working, white, etc
- Government documents
- Data – statistics, financial, raw, etc
- Standards – technical, accounting, etc
- Patents
- News articles

- **What are the information sources in your subject & research area?**
- **What can they be used for?**
- **Where can you find them?**

# Information Types

## Grey Literature

Information not available through the usual publishing channels

### Examples:

- Theses
- Working papers
- Institutional repositories
- Government reports & guidelines

## Primary Literature

First-hand accounts of events & original research works (new discoveries / contributions)

### Examples:

- Interviews, speeches
- Conference papers
- Journal articles
- Patents
- Standards

## Secondary Literature

Interpretations, observations, evaluations & opinions about the primary sources, analytical and critical writings

### Examples:

- Textbooks
- Reviews
- Encyclopedias

## Tertiary Literature

Compilations & descriptions of primary & secondary literature by titles, authors, categories, and other classifications

### Examples:

- Bibliographies
- Directories
- Databases

## How do I search and access these?

# Research Tools

- [NTU OneSearch](#) – [NTU Library](#) search tool
- Databases: [Collections A-Z List](#)
  - Subject databases – SPIE Digital Library, IEEE Xplore, Engineering Village, Knovel etc
  - Citation databases – Web of Science, Scopus, etc.
  - Multidisciplinary databases – ScienceDirect,, Proquest, SpringerLink etc.
- Institutional repositories
  - [DR-NTU](#) (Open & Restricted Access)
- [Google Scholar](#)
- Data repositories – DR-NTU ([Data](#))
- [Google Dataset Search](#) (beta)

# Search techniques

- Block building (narrowing)
- Citation searching (broadening)

[Both techniques involve the use of keywords, subject-terms, key concepts]

# Block building

- Each **block** represents a **concept**
- Cluster related subject-terms/variables/keywords for each concept block
- Each concept block is searched separately
- Blocks are combined to get final results

A simple example:

## Concept 1

**Artificial  
Intelligence  
OR  
Intelligent  
computing  
OR  
Cognitive  
systems**

**AND**

## Concept 2

**Cyber security  
OR  
Network  
security  
OR  
Internet  
security**

## KEYWORDS, OPERATORS & FILTERS

Literature Search: a librarian's handout to introduce *tools*, *terms* and *techniques*

### BRAINSTORM keywords

These are the main ideas of your research question/topic sentence.

### EXPAND your keywords

Look at the subject headings of the materials you find and use those terms as applicable.

Or look up your keywords in a subject-specific database thesaurus to find predefined terms (called "controlled vocabulary").

### USE Boolean operators

Insert AND, OR, and NOT into your search to broaden or narrow it.

For example: PTSD OR Post Traumatic Stress Disorder AND soldiers NOT Navy.

### REFINE your search results

Filters in the database allow you to narrow a search by year, content type, etc.

At the library:  
Consult a liaison librarian  
or subject specialist.

- **Boolean operators**
  - AND, OR, NOT
- **Truncation or Wildcard**
  - **comput\*** gets results with: computer, computing, computation, computational
  - **colo#r** gets results with: colour, color
- **Thesarus search (if available)**

# Looking for references

# Citation Searching

- Where the researcher searches for articles, books, or other materials that have cited or referenced a particular work
- **Cited references** are the articles, books or other materials listed in a **bibliography** or as works cited in a particular publication.
- Within databases like Web of Science or Scopus, you can find a particular **cited reference**, or cited author, forward in time to find more current articles that have also cited that author or work.

### Abstract:

The enabling of ac microgrids in distribution networks allows delivering distributed power and providing grid support services during regular operation of the grid, as well as powering isolated islands in case of faults and contingencies, thus increasing the performance and reliability of the electrical system. The high penetration of distributed generators, linked to the grid through highly controllable power processors based on power electronics, together with the incorporation of electrical energy storage systems, communication technologies, and controllable loads, opens new horizons to the effective expansion of microgrid applications integrated into electrical power systems. This paper carries out an overview about microgrid structures and control techniques at different hierarchical levels. At the power converter level, a detailed analysis of the main operation modes and control structures for power converters belonging to microgrids is carried out, focusing mainly on grid-forming, grid-feeding, and grid-supporting configurations. This

# DR-NTU

The screenshot shows the DR-NTU homepage. At the top left is the Nanyang Technological University Singapore logo. The header includes navigation links: COMMUNITIES & COLLECTIONS, RESEARCH PAPERS, THESES, FYPS, ACADEMIC PROFILE, and GUIDELINES. A search bar and a login link are on the right. The main content area features a large graphic with the text 'OPEN YOUR RESEARCH TO THE WORLD AND LET THE CITATIONS ROLL IN!' and a banner below it stating 'Improve chances of higher citations when you make your papers freely available in DR-NTU!'. To the right of the graphic is a 'Welcome to DR-NTU' message explaining the repository's purpose and providing a link to the 'Terms of Use'. At the bottom right, there is a red button that says 'Click Here to Deposit Publications/Theses/FYPs'.

# Get full-text

- [https://www.ntu.edu.sg/library/About\\_NTULibrary/Pages/Tools.aspx](https://www.ntu.edu.sg/library/About_NTULibrary/Pages/Tools.aspx)

## Full Text @ NTU Library

Need access to full text e-resources anytime, anywhere? Looking to speed up accessing an e-resource which is subscribed by NTU Library? Found a useful article online or e-book but prompted for login or payment? Facing access barriers and wondering if there are alternative routes or open access options to the same content you need?

NTU Library has the tools you need to unlock your access to full text e-resources seamlessly on your web browser.

There are 2 tools to access full text e-resources subscribed by NTU Library. Do note these tools would benefit NTU Staff/Students and Associate Staff the most since they would have full access to all of the e-resources.

- **NTU LibGenie** - A smart extension for your desktop browser to provide seamless access to NTU Library subscribed full text e-resources and assist automatically with alternatives when you hit barriers.
- **NTU LibBookmark** - A simple bookmark for your mobile/desktop browser to enable you easy access to full text e-resources subscribed by NTU Library.

# NTU LibGenie

- Download the NTU LibGenie (Library Access) extension at the Lean Library website
- 2. Click on the featured browser image and you will be directed to the download page to install the Library Access extension
- 3. Depending on browser, it will ask you to reconfirm and you can select Allow or Add
- 4. (If you are off campus) A new window would open. Select your Library as Nanyang Technological University (NTU) and click save.
- 5. Once installed, NTU LibGenie (Library Access) is ready for your use

Access through your institution to view subscribed content from home

# Avoiding plagiarism

## 1. To avoid plagiarism, you must give credit whenever you use any:

- idea, theory, illustration or opinion of other people
- statistics, graphs, drawings, images of other people
- quotation of actual spoken or written words of other people
- paraphrase of spoken or written words of other people

## 2. Follow CITATION RULES

- use in-text citations and end-of-text referencing
- create a bibliography or reference list
- formatting differs depending on the style you are using (e.g., IEEE, APA, Numbered, etc.)
- [use EndNote or other bibliographic management software](#)

# IEEE citation style

- Inserting References in the Text

Number in square brackets at the end of the sentence or immediately after the name of the author

..... ..as suggested by Smith [4] and Brown and Rodriguez [5].

Wood et al. [7] report their findings as...

...as demonstrated in [3].

- A full corresponding reference is listed at the end of the paper, next to the respective citation number.

### Introduction to Reference Management Software

This guide is created to introduce some common Reference Management Software to you that can be used to manage large numbers of references for your writing assignments or research papers. You may refer to the individual software by clicking on the tabs above.

NTU Library supports EndNote, Mendeley and Zotero as seen below. You only need to use one to manage your referencing needs but you may want to try out them all to decide which you prefer.

### Reference Managers Compared
